Executive Chair Seating

Supporting . Synchronizing .

rockworth.com

EXECUTIVE

Experiencing Our Seating Unfolded

Folding as a process in architectural design is essentially experimental. Rockworth interest lies on the process in which the sequence of human behavior transformation that affect the functionality of object. Considering this an open and dynamic developing process where the design evolves with alternate periods of imbalance. We can appreciate the function of folding as a design generator by phase transitions and as power to reveal.

This experiment allows us to understand how human being interacts with a chair at different space and time at work, we responds to these differences by carefully study the harmony among seating, supporting and synchronizing.

S1 SEATING

Our chairs are assembled with high quality material and components, featuring high density molded foam seat cushion that conforms to your body movement. This providing excellent stress relieving comfort and enhance better blood circulation. Wide range of fabric is available for selection to match your overall color scheme.

S2 SUPPORTING

Our chairs provide comfortable, full body sedentary support of which you can sit in at least eight hours without encountering back strains, neck pains or overall body aches. Our chair design was inspired by the simple fact that each of users is unique. The position we sit and move in our chair are subtly different too. We constantly find a better way to provide individual comfort and support.

S3 SYNCHRONIZING

A fully adjustable chair is indisputable the must features in which a decent chair should have. Back height adjustable, seat depth and arm support should all be adjustable to better support you in any position. An ergonomic chair should have pneumatic lever adjustment to adjust the seat height. A tension knob allows you to adjust reclining back rest to proper with your body weight. Also an adequate back rest for curvature your spine while providing lumbar support. An appropriate ergonomic designed chair, hence, should accommodate people with a wide range of body size and posture.

Step toward the green

**We will design our products,
processing and building for
the environment.**

It has been over a few years that ROCKWORTH has studied the consequences to the environment caused by our business.

The study is conducted not only within our organization but also to our customers, suppliers and other environmental specialists.

WE UNDERSTAND the difference of steps toward the sustainable organization and realize that we can only achieve this by working together with everyone in our company. Starting from product design, production through delivery and installation.

IN THE JOURNEY OF sustainable business and environmental friendly, we continuously focus on the following development and improvement.

- Our products meet or exceed applicable legal requirements and other requirement related to the environment aspects of the organization.
- We are continuously improving performance focus on preventing pollution, reducing waste and reducing consumption of non-renewable energy.
- We are implementing technologies to efficiently use of energy resources.
- We design, process and produce our products for the environment.
- We promote environmental knowledge and awareness.
